

INNOVATIVE TECHNOLOGIES IN EDUCATION

Polatova Saltanat Mirzaliyevna.

Tashkent Medical Academy, Termiz Branch,

Assistant Professor of Latin and Medical Terminology.

Abstract. Innovative technologies in all aspects of life among other things, Mugim occupies an important place in education. It is innovative in education improving the educational process using technologies, making it more interactive and convenient and effective organization. Diversity of types of education, methods of using interactive methods are widely covered. In addition, online courses and distance learning are also considered.

Key words: innovations, distance education, interactive methods, technologies.

Innovative methods of teaching in the pedagogical process goals, methods, content and forms of education, teacher and implies the introduction of joint innovations of the student. Current At the stage, the main task of the higher education institution is taking place in the world non-standard, flexible and able to respond to changes in time training of undergraduate specialists. Modern technology education entering the field as part of information and communication technology came Therefore, in order to prepare them for future professional activities innovative teaching methods are used at the university.

Relevance of the topic. The university is a future specialist It takes a lot of work to train personnel The process of doing it is based on teaching methods, its level of efficiency determines the qualification level of the future graduate. Traditional methodology the relationship between the teacher and the student, the student's education by the teacher continuous monitoring of activities, control of learning material includes doing.

Purpose of educational types. The result of learning is the content of the educational process is considered as the transfer of the amount of knowledge due to rational organization, in which one when one-way communication takes place, it starts an active flow of information. As part of our presentation, we will consider interactive methods of teaching out, they include:

way of presenting the problem;
presentations, discussions;
case studies;
work in groups;
brainstorming method;
critical thinking method;

quizzes;
mini-studies;
business games;
method of role-playing games and others.

All the above-mentioned types of education are used in the form of a game, and that's it processes produce effective results. The effectiveness of these methods is that students can raise individual problems themselves. This the main success of the method is that the teacher is removed from the audience looks for an "independent solution" to the problem. Organization of problem-based education It is a very complicated process that requires serious preparation from the teacher. In addition, it is interactive Blackboards are interesting for teachers and students and allows you to create lessons that make learning more interesting. Organization of online courses and forms of distance education, coursera, udemy Online learning platforms such as study courses from anywhere in the world allows.

Expected results - knowledge, professional skills and skills are quickly mastered, firmly taught, and later in professional activity easy to use. Students' creative potential, knowledge in front of teachers such methods of teaching aimed at activating the desire to acquire task of development and implementation. The learning process is for everyone It is the main component of the educational process in his life. Innovative education in the process, students learn not only themselves, but also teach each other according to the principle, one person teaches everyone and everyone teaches everyone.

Conclusion: Teaching students to work in a team, to understand new knowledge and help in mastering and self-confidence, self-improvement gives his wish.
