and Technology Academic Lyceum*

Annotation: In this article, today's innovation and interactive in the educational system;

Use of methods and its affective aspects detailed based on examples and substantiated. Especially in the modern educational system innovation or without interactive techniques, it is difficult to comfort the effectiveness of Education.

Keywords: Innovation, Interactive, Information Technology, independent thinking, creativity, research, interests, student-student, creative work, collaboration, - FSMU, - Bliss-game, - crossroads, - Circulation Technology and other technologies.

Currently in the educational process interactive methods innovation technologies, interest, attention to the application of pedagogical and information technologies in educational process it is getting stronger day by day. The use of these makes student students only ready not only the acquisition of knowledge, but also the acquisition of the knowledge that they seek themselves, they also cite the conclusions of the letter to their analysis by studying the question teaches their releases. Teacher this is the development, formation, knowledge of personality in education creates conditions for acquisition and upbringing, as well as management, performs a referral function. Knowledge of pedagogical technology and pedagogical skills from teachers in this regard, the skill of using experience and interactive techniques, the requirements for training ensures that they have an educated, mature qualification. The specificity of these techniques that is, they are carried out only through the joint activities of educators and students carried. Such methods are extensive not only in educational process, but also in education applied.

All these state and public organizations, naturally, first, continuous education the system assumes a radical revision of the content of the activities of institutions the compound is process. Social activities, public education, clear education and upbringing the focus on the goal is the basis of the formation of a free personality will. Liberalization, spiritual renewal of society in the first place, the traditions of the

generation it ensured through the absorption of humanitarian and democratic values. These are the development of education based on it is of particular importance.

For example, to organize seminar competition classes to increase student activity very useful and activates them. This method increases the interest and activity of students and students are warned in advance to see preparation. The students are divided into two subgroups. Each of them on the topic questions should come in order. Students at the beginning of the Seminar with the conditions of the competition will be introduced. In this, not only for the answers, but also for the correct and clearness of the questions, certain scores are set for additions and corrections. All group Students for their active participation, however, minus points may also be indicated, for example, from three to three for incorrect answers and questions, the method of subtracting points can be used. Race points accumulated on the board during the month can reached. Additional points can stimulate winning group at the end of the workshop participants. In addition, the pedagogue meticulously hearing the answers, each student should be given an assessment. This method further knowledge to be more firmly occupied, to increase the culture of speech, to structure questions correctly. The most important thing is to acquire independent knowledge in students, search; the creative approach to the topic will increase.

Small group method. In this method, the students of the group are divided into several groups; each there may be 4-5 students in one group. The leader of each group is appointed. They are given a task in advance. The students of the group participated together in the seminar they must try fully reveal their questions. Other groups are the main questions asked to the speaker, the students of the group help answer questions they give. After the protection of the main speaker, opponents expressed the question even more must give. After the students of the third and fourth groups expressed their opinion, the group that conducted the research should comment by placing mark.

It is necessary to choose students who are good at making the leader of the group. In this way such as independent work of students, creative work, performance of work as collective skills will develop. In this regard, it is advisable to organize didactic games.

In pedagogical science, the concept of didactic Games has not yet fully developed, so for also, it is given different definitions. This is the case of didactic game development and popularization makes work difficult. Now in lessons the use

of didactic games is gaining popularity. Because this method has many of its own has positive sides.

Through this method, several works are performed at the same time:

- Verification of acquired knowledge.
- Acquiring new knowledge and checking in occupation.
- Professional training (skill, skill formation).

Didactic games considered the method closest to real events, and it is of importance that is more practical. One of the most basic tasks of higher education is to train highly qualified personnel is delivery. We are specific in each specialty to perform the task we consider it necessary to develop business Games.

Interactive methods and new pedagogical technologies shown below along with giving, it solves its educational tasks. - Boomerang technology creates the possibility of forming the logic of critical thinking, memory, ideas, forms the skills of making thoughts and will develop arguments of writing and verbal speech. Thus, together, this method carries out a number of tasks of an educational nature; team skill in working with, good manners, kindness, dexterity, other people's opinion creative approach to work, forming the qualities of respect, activity, leadership, own self-assessment of interest to be effective in activities.

In improving the effectiveness of educational system-FSMU,-Bliss-game, Technologies such as —Crossroads, - circulation technology can also be used.

Well, the above modern methods, which used in trainings technologies make logical, mental, creative, critical, independent thinking in Students-Students gives help to the formation.
